KOLHAPUR INSTITUTE OF TECHNOLOGY'S
COLLEGE OF ENGINEERING KOLHAPUR
(EMPOWERED AUTONOMOUS)

An Annual Report on

The Events and activities of the year

Conducted by

Team Mavericks

Under the Guidance of

Prof. Shivprasad Majgaonkar
Faculty Coordinator, Team Mavericks

KIT's College of Engineering (Autonomous) Kolhapur

Team Mavericks

KOLHAPUR INSTITUTE OF TECHNOLOGY'S COLLEGE OF ENGINEERING KOLHAPUR (EMPOWERED AUTONOMOUS)

Details of Activities conducted in AY 2025-26

Name of Club – Team Mavericks

Logo –

Tagline - "Stay Updated, Stay Ahead"

Establishment Date - 13th August, 2016

Information about club - Team Mavericks is a vibrant, student-led organization committed to community engagement and driving social impact. Through a wide array of events and initiatives, we create meaningful opportunities for college students to connect, learn, and give back. Whether it's through educational workshops or hands-on community service, our goal is to make a lasting difference on campus and beyond. Guided by our motto, **Team mavericks give you a platform where you can learn and showcase your talent** we blend knowledge with enjoyment, inspiring lifelong learning, collaboration, and a strong sense of camaraderie among our members.

Faculty Coordinator - Prof. Shivprasad Majgaonkar

Activities Conducted in the Academic Year 2025-26 by the student club-

Name of the Activity	Date of Activity	Event Leads	Student beneficiary count
School Visit	19th August 2025	Ashka C, Sangram N and Siddhi K	140
INVICTA	12th and 13th October 2025	Advait Kulkarni, Hrushikesh Tamhankar, Rahul Patil, and Siya Yaranalkar	279
Verbafest	09th February 2026	Ishwari Ambrale, Vinayak Tale, Sneha Inamdar	180
BODHANTRA	19th ,20th ,26th ,27th April and 1st May 2026	Aaryada Kajarekar and Sarthaki Dixit	210

Summary of School Visit:

On August 19, 2025, an outreach program at New English School in Khupire reached 140 students across the 8th, 9th, and 10th grades to focus on skill development, career planning, and social responsibility. The initiative featured an in-depth Career Guidance session covering Science, Diploma, Arts, Commerce, Defense and Police sectors. Concurrently, Digital Literacy workshops taught students to navigate social media responsibly, identify online scams, manage screen time, and utilize online resources for learning. The program also engaged students through interactive games, including "Grab n Go" for patience and "Tagline Takkar" for critical thinking, alongside a social awareness play titled "Importance of Choices" that addressed bullying, gaming addiction, and daily decision-making.

Summary of INVICTA:

On October 12 and 13, 2025, the flagship two-day workshop series INVICTA provided free, project-based technical and creative training to 279 participants across four specialized tracks. The Full-Stack Web Development track guided 75 participants through frontend and backend technologies to build responsive, scalable applications. The 3D Design and Modeling track trained 70 participants in Blender fundamentals, including texturing, rendering, and animation. The Photography and Post-Processing track instructed 62 participants on manual camera modes, composition, and advanced editing software. Concurrently, the IoT and Microcontrollers track taught 72 participants automation and integration using the ESP8266 through guided hardware projects. Each track recognized a top performer at its conclusion.

Summary of VERBAFEST:

On February 9, 2026, the placement-oriented event VERBAFEST drew 180 participants to simulate recruitment processes across three competitive tracks. The first track evaluated candidates through a digitized Aptitude Test, a Gamified Assessment, and an English proficiency Versant Test, utilizing Team Maverick's secured online platform to ensure integrity. The Group Discussion track evaluated communication through general, abstract, and situational rounds, concluding with the Debate track tested rapid point generation and critical thinking by slashing preparation time and introducing a mid-debate twist that forced teams to instantly swap opposing viewpoints. Top performers were crowned as winners for each track.

Summary of BODHANTRA:

Bodhantra was a multi-day developmental series held on 19th ,20th ,26th ,27th April and 1st May 2026, specifically designed to bridge the gap between junior college and undergraduate education. The program builds 21st-century competencies among participants. Guided by the principle "Learn with Fun," the program observed a clear transformation in participants by Day 5, with visible improvements in presentation skills. Even students facing language constraints or low confidence successfully stepped out of their comfort zones. These outcomes exceeded expectations, setting a high benchmark for future efforts in supporting student adaptation.

List of Topics covered in the series:

1. How to talk to anyone
2. Invisible hands behind visible choices
3. Higher Studies
4. Geo Politics
5. AI tools
6. Hackathon: software & Hardware
7. LinkedIn
8. 7 Chakra's and Manifestation
9. Ancient India
10. Indoor activities
11. Outdoor activities
12. Act: Me, Mind and Kali
13. Talent show

Day 1-

On April 19, 2026, the developmental series commenced with 73 candidates focusing on professional communication, social networking, and self-restraint. The program opened with a fast-paced 15-task Outdoor Activity engineered to break the ice and build a strong collaborative network. Indoors, a professional development session titled "How to Talk to Anyone" introduced the Four-Color Theory framework to help participants map their dominant communication styles and adapt them to diverse personalities. This was followed by a "Ball Passing" indoor coordination game that challenged real-time concentration, teamwork, and memory under reversing commands. The day also featured a theatrical performance, "Me, Mind and Kali," which allegorically highlighted the importance of self-control against external temptations, and concluded with an educational session on behavioral psychology and media influence.

Day 2-

On April 20, 2026, 63 candidates participated in a high-impact schedule centered on academic advancement and strategic simulations. The morning began with a “Pen in Circle” outdoor coordination activity designed to boost team synchronization and rapid decision-making. Transitioning to academic skills, a specialized session on Higher Studies compared domestic M.Tech routes with international MS degrees while outlining the fundamentals and portfolio value of drafting research papers. Team strategy and verbal precision were then tested through a tactical, word-guessing indoor activity based on the game "Codenames". The day concluded with a global geopolitics track, featuring an educational module on international trade and alliances, followed by an immersive resource-management simulation where six student-led countries traded asset cards to survive sudden global crises.

Day 3-

On April 26, 2026, 49 candidates engaged in modules tailored for modern career readiness, spanning cutting-edge technology, corporate networking, and competitive engineering concepts. The itinerary started with a silent outdoor coordination activity that used non-verbal tasks, like arranging sequences by birthdates without speaking, to emphasize body language and intuitive teamwork. A technical productivity session followed, demonstrating how to strategically leverage modern AI tools to improve everyday efficiency and academic work. Group problem-solving and quick thinking were practiced under pressure through a "Wheel of Fortune" indoor word-decoding game. To prepare students for competitive technical ecosystems, a preparatory session provided a comprehensive roadmap for effectively approaching hackathon prompts and managing time. The day concluded with a comprehensive, two-part LinkedIn module where students learned the anatomy of profile optimization and immediately applied the theory by building and polishing their actual profiles in a hands-on simulation.

fig: LinkedIn Simulation

Day 4-

On April 27, 2026, 47 candidates focused on self-awareness training, physical coordination, and confidence-building. The day opened with an energetic cup-racing outdoor activity titled "Run and Stack" which tested physical speed, hand-eye coordination, and team collaboration under pressure. Next, an educational session titled "The 7 Chakras and Manifestation" simplified personal growth concepts by demonstrating how aligning thoughts, energy, and actions practically turns internal aspirations into reality. The final half of the program was dedicated to boosting personal confidence through a major two-part performance showcase, starting with an open-mic talent segment and culminating in a full-scale Talent Show featuring advanced singing, dancing, and acting acts from both students and team members.

fig: Session

Day 5-

On May 1, 2026, the fifth day of the program drew 54 candidates for a track balancing historic analytical frameworks with investigative problem-solving. An academic session on Ancient Indian Knowledge Systems highlighted historic breakthroughs in mathematics (such as the Katapayadi and Kuttaka methods), traditional economic trade networks, ancient surgical advancements, and strategic warfare ethics. The program concluded with an interactive "Murder Mystery" critical thinking game where seven teams analyzed forensic reports, call logs, and message trails to solve complex, simulated investigative cases.

Winners:

Throughout the multi-day BODHANTRA development series, exceptional student performance was recognized daily with the declaration of the Candidate of the Session (COS) awards. The daily honors were awarded to Mrudula Bhojkar for Day 1, Yash Jadhav for Day 2, Ayan Mulani for Day 3, Ranjitkumar Pawar for Day 4, and Saayali Shahpurkar for Day 5. Culminating the entire program, Venkatesh Malgave was officially crowned as the ultimate Candidate of Series for demonstrating outstanding transformation and active adaptation across all five days of technical, strategic, and professional tracks.
